Movies app

Short description:

A mobile app that showcases a comprehensive list of movies, complete with detailed information and a search feature. Developed using the efficient Flutter framework, the app seamlessly integrates SQLite as a local database. The app fetches data from APIs by utilizing the HTTP package, while SQLite ensures a seamless storage solution for users to save their favorite movies.

Skills:

Flutter Framework, Dart Programming language, SQLite local Database, Fetching APIs

Scope:

I created this app as a project for my Mobile Development course in college.

Role:

I developed the entire app by myself.
